## 1 Application filed

Household Appliances and Industrial control

## 2 Overview

VGM128064B0W19 is a monochrome OLED display module with 128×64 dot matrix. The characteristics of this display module are high brightness, self-emission, high contrast ratio, slim/thin outline, wide viewing angle, wide temperature range, and low power consumption.

## 3 Features

- Display Color: White
- Dot Matrix:128×64
- Driver IC: SP80H0
- Interface: 8-bit 8080,8-bit 6800, 4-wire SPI, I<sup>2</sup>C
- Wide range of operating temperature: -40°C to 70°C
- Wide range of Storage temperature: -40°C to 85°C

| Storage Temp           | Tstg   | -40  | +85 | °C   | -                 |

Note (1): All of the voltages are on the basis of “VSS = 0V”.

Note (2): Permanent breakage of module may occur if the module is used beyond the maximum rating. The module can be normal operated under the conditions according to Section 9 “Electrical Characteristics”. Malfunctioning of the module may occur and the reliability of the module may deteriorate if the module is used beyond the conditions.

## 10 Functional Specification and Application Circuit

### 10.1 Power ON and OFF sequence with External VCC

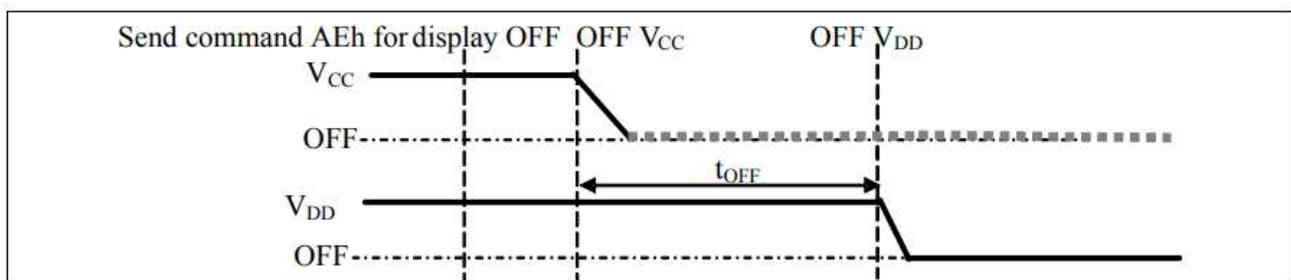

Power ON Sequence:

1. Power ON  $V_{DD}$ .
2. After  $V_{DD}$  become stable, set RES# pin LOW (logic low) for at least  $3\mu s(t_1)^{(3)}$  and then HIGH (logic high).
3. After set RES# pin LOW (logic low), wait for at least  $3\mu s(t_2)$ . Then Power ON VCC. <sup>(1)</sup>
4. After  $V_{CC}$  become stable, send command AFh for display ON. SEG/COM will be ON after  $100ms(t_{AF})$ .

Power OFF Sequence:

1. Send command AEh for display OFF.
2. Power OFF  $V_{CC}$ .<sup>(1), (2)</sup>
3. Power OFF  $V_{DD}$  after  $t_{OFF}$ .<sup>(4)</sup> (where Minimum  $t_{OFF}=0ms$ , typical  $t_{OFF}=100ms$ )

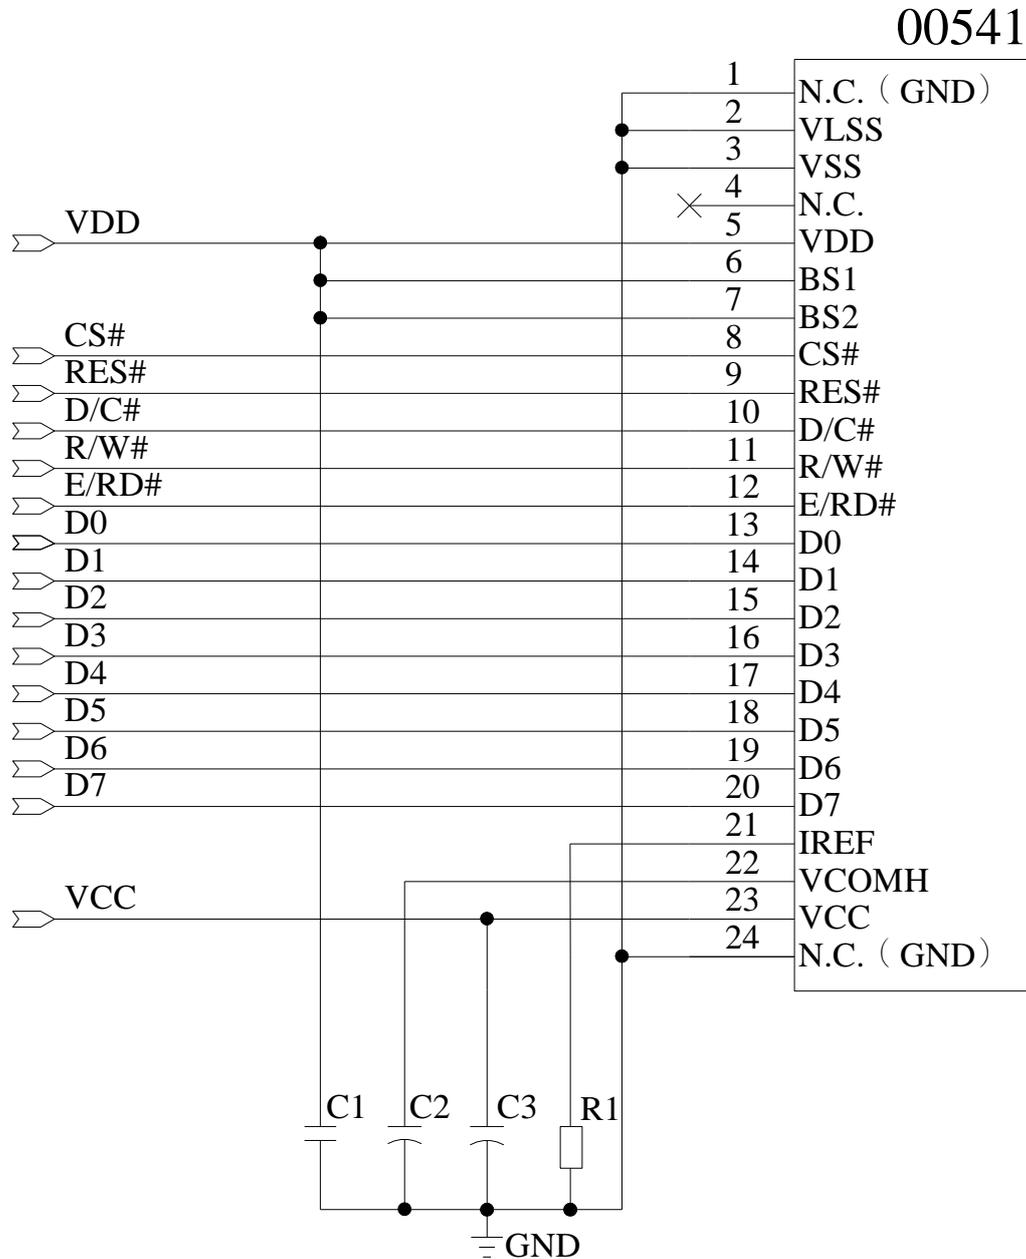

Note:

- <sup>(1)</sup>  $V_{CC}$  should be kept float (i.e. disable) when it is OFF.
- <sup>(2)</sup> Power Pins ( $V_{DD}$ ,  $V_{CC}$ ) can never be pulled to ground under any circumstance.
- <sup>(3)</sup> The register values are reset after  $t_1$ .
- <sup>(4)</sup>  $V_{DD}$  should not be Power OFF before  $V_{CC}$  Power OFF.

### 10.3 Display Control Instruction

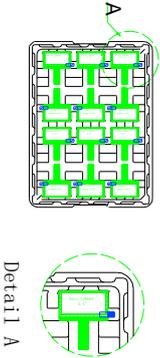

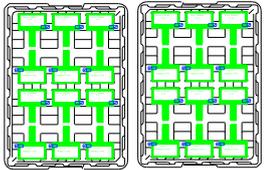

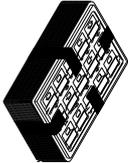

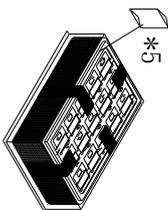

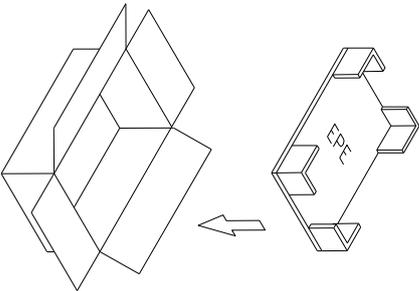

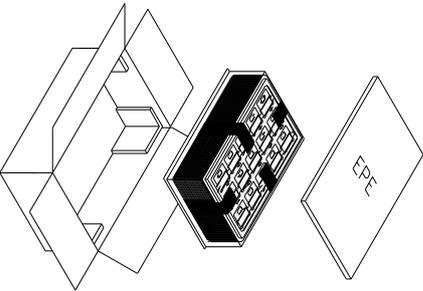

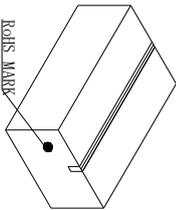

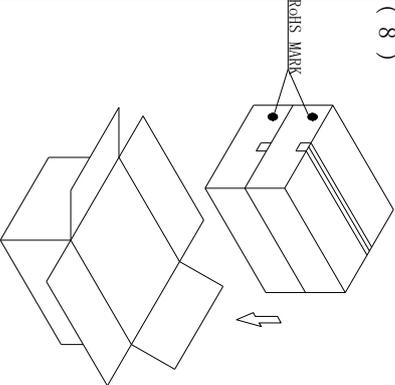

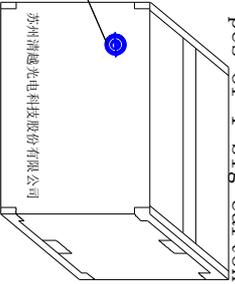

Refer to SP80H0 IC Specification.

### 10.4 Recommended Software Initialization

In order to ensure the reliability and stability of the module, the module must initialize use the following code, Malfunctioning of the module may occur and the reliability of the module may deteriorate if the module is used beyond the initialize code.

```
void Init_IC()
{
    Write_Command(0xAE);    //Set Display Off
    Write_Command(0x81);    //contrast control
    Write_Command(0xA0);
    Write_Command(0xA4);    //Set Entire Display On/Off
    Write_Command(0xA6);    //Set Normal Display
    Write_Command(0x20);    //Set Data Address Mode
    Write_Command(0x02);
    Write_Command(0x40);    //Set Display Start Line
    Write_Command(0xA0);    //Segment Remap
    Write_Command(0xA8);    //multiplex ration mode:64
    Write_Command(0x3F);
    Write_Command(0xC0);    //Set COM Output Scan Direction
    Write_Command(0xD3);    // Set COM0 ( Set Display Offset )
    Write_Command(0x00);
    Write_Command(0xDA);    //common pads hardware: alternative

#### Test and measurement conditions

- All measurements shall not be started until the specimens attain to temperature stability, the stable time is at least 15 minutes.
- The degradation of polarizer is ignored for item 5.
- The tolerance of temperature is  $\pm 3^{\circ}\text{C}$ , and the tolerance of relative humidity is  $\pm 5\%$ .

#### Evaluation criteria

- The function test is OK.
- No observable defects.
- Luminance:  $\geq 50\%$  of initial value.
- Current consumption: within  $\pm 50\%$  of initial value.

### 12.2 Lifetime

End of lifetime is specified as 50% of initial brightness and the test pattern at operating condition is 50% alternating checkerboard.

| ITEM                | MIN    | MAX | UNIT | CONDITION  |
|---------------------|--------|-----|------|--|
| Operation Life Time | 40,000 | -   | h    | 60 cd/m <sup>2</sup> ,<br>50% alternating checkerboard,<br>22±5°C, 55±25% RH |

### 12.3 Failure Check Standard

After the completion of the described reliability test, the samples were left at room temperature for 2 hrs prior to conducting the failure test at 22±5°C; 55±25% RH.

## 14 Outgoing Quality Control Specifications

### 14.1 Sampling Method

- (1) GB/T 2828.1/ISO2859-1: inspection level II, normal inspection, single sample inspection
- (2) AQL: Major 0.65; Minor 1.0

### 14.2 Inspection Conditions

The environmental conditions for test and measurement are performed as follows.

Temperature:  $22 \pm 5^\circ\text{C}$

Humidity:  $55 \pm 25\% \text{R.H}$

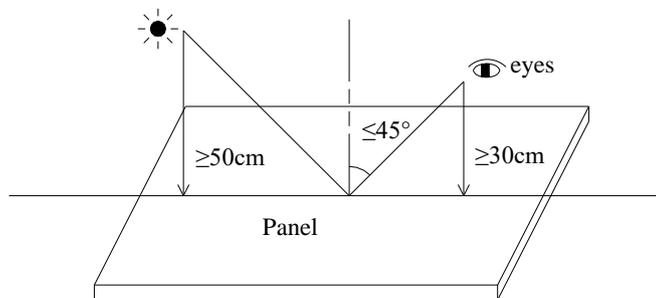

Fluorescent Lamp: 30W

Distance between the Panel & Lamp:  $\geq 50\text{cm}$

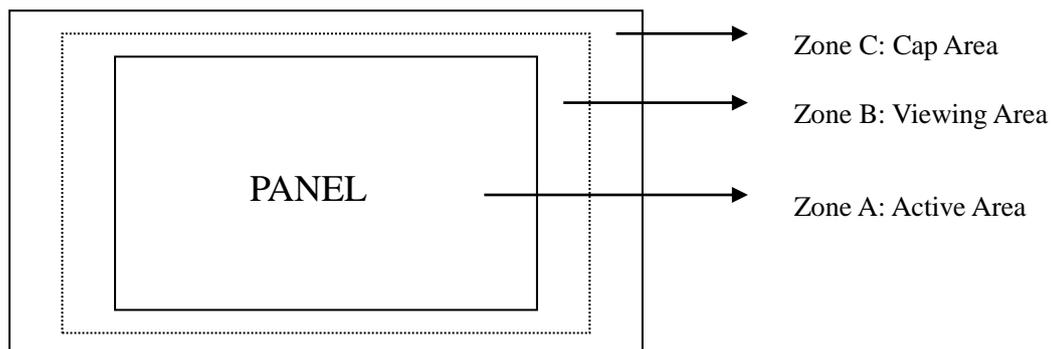

Distance between the Panel & Eyes:  $\geq 30\text{cm}$

Viewing angle from the vertical in each direction:  $\leq 45^\circ$

## 15 Precautions for operation and Storage

### 15.1 Precautions for Operation

- (1) Since OLED panel is made of glass, do not apply any mechanical shock or impact or excessive force to it when installing the OLED module. Any strong mechanical impact due to falling dropping etc. may cause damage (breakage or cracking).
- (2) The polarizer on the OLED surface is made of soft material and is easily scratched. Please take most care when handing. When the surface of the polarizer of OLED Module is contaminated, please wipe it off gently by using moisten soft cloth with isopropyl alcohol, do not use water, ketone or aromatics. If there is saliva or water on the OLED surface, please wipe it off immediately.
- (3) When handling OLED module, please be sure that the body and the tools are properly grounded. And do not touch I/O pins with bare hands or contaminate I/O pins, it will cause disconnection or defective insulation of terminals.
- (4) Do not attempt to disassemble or process the OLED module.
- (5) OLED module should be used under recommended operating conditions shown in the specification. Since the higher voltage leads to the shorter lifetime, be sure to use the specified operating voltage.
- (6) Foggy dew, moisture condensation or water droplets deposited on surface and contact terminals will cause polarizer stain or damage, the deteriorated display quality and electrochemical reaction then leads to shorter life time and permanent damage to the module probably. Please pay attention to the environmental temperature and humidity.
- (7) An afterimage is created by the difference in brightness between unused dot and the fixed dot, according to the decrease of brightness of the emitting time. Therefore, to avoid having an afterimage, the full set should be thoroughly used instead of using a fixed dot. When the fixed dot emits, an afterimage can be created.
- (8) Flicker could be come out at full on display. And it disappears when frame frequency increase, but brightness decreases too.

### 15.2 Soldering

- (1) Soldering should be performed only on the I/O terminals.
- (2) Use soldering irons with proper grounding and no leakage.
- (3) Iron: The temperature setting of electric iron is 350°C, but we suggest that during soldering, the temperature of iron tip should be no higher than 330°C and soldering be finished within 3~4 seconds.

### 15.3 Precautions for Storage

- (1) Please store OLED module in a dark place. Avoid exposure to sunlight, the light of fluorescent lamp or any ultraviolet ray.
- (2) Keep the environment temperature between 10°C and 35°C and the relative humidity less than 70%. Avoid high temperature and high humidity.
- (3) Keep the OLED modules stored in the container when shipped from supplier before using them is recommended.
- (4) Do not leave any article on the OLED module surface for an extended period of time.

### 15.4 Warranty period

QingYue warrants for a period of 12 months from the shipping date when stored or used under normal condition. In addition to failure and quality problems caused by man-made damage and force majeure, we promise to provide maintenance and replacement free of charge during the warranty period. If the warranty period has been exceeded, we need to collect the staff's travel expenses, materials and other related costs.
