SPECIFICATIONS № 12TLM004		Issue: Jun. 15, 2012			
1. APPLICATION					
This Specification is applicable to 8.79cm (3.5 inch) TFT-LCD back-light monitor for non-military use.					
ORTUS TECHNOLOGY makes no warranty or assume no liability that use of this Product and/or any information including drawings in this Specification by Purchaser is not infringing any patent or other intellectual property rights owned by third parties, and ORTUS TECHNOLOGY shall not grant to Purchaser any right to use any patent or other intellectual property rights owned by third parties. Since this Specification contains ORTUS TECHNOLOGY's confidential information and copy right, Purchaser shall use them with high degree of care to prevent any unauthorized use, disclosure, duplication, publication or dissemination of ORTUS TECHNOLOGY'S confidential information and copy right.					
If Purchaser intends to use this Products for an application wh and/or safety in functionality and/or accuracy such as transpor (aircraft, train automobile etc.), disaster-prevention/security ec equipment, Purchaser shall consult ORTUS TECHNOLOGY of	ich requires higher level of rt equipment quipment or various safety on such use in advance.	reliability			
O This Product shall not be used for application which requires extremely higher level of reliability and/or safety such as aerospace equipment, telecommunication equipment for trunk lines, control equipment for nuclear facilities or life-support medical equipment.					
ORTUS TECHNOLOGY assumes no liability for any damage resulting from misuse, abuse, and/or miss-operation of the Product deviating from the operating conditions and precautions described in the Specification.					
If any issue arises as to information provided in this Specification or any other information, ORTUS TECHNOLOGY and Purchaser shall discuss them in good faith and seek solution.					
ORTUS TECHNOLOGY assumes no liability for defects such during peeling off the protective film or Purchaser's assembly	as electrostatic discharge f process.	ailure occurred			
⊘ This Product is compatible for RoHS directive.					
Object substance	Maximum content [ppm]				
Cadmium and its compound 100					
Hexavalent Chromium Compound 1000					
Mercury & Mercury compound					
Polybrominated biphenyl series (PBB series)	1000				
Polybrominated biphenyl ether series (PBDE series)	1000				

2. OUTLINE SPECIFICATIONS

- 2.1 Features of the Product
 - 3.5 inch diagonal display, 960 [H] x 240 [V] dots.
 - Two kinds of input specifications can be selected.
 - -"MODE" = "VSS"
 - 8-bit / 16,777,216 colors.

Various display controls and functional selection by 3-wire serial communication method.

-"MODE" = "VDD"

6-bit / 262,144 colors. Various display controls and functional selection by terminal control.

- 3V voltage single power source.
- Timing generator (TG), Counter-electrode driving circuitry, Built-in power supply circuit
- Power save (Standby) mode capable.
- Built-in rush current reduction circuit
- Built-in panel residual charge reduction circuit
- Long life & high brightness LED back-light monitor.

Fig. 1: Dot arrangement (FPC cable placed down)

3. DIMENSIONS AND SHAPE

3.1 Dimensions

Items	Specifications	Unit	Remarks
Outline dimensions	76.90[H] × 63.90[V] × 3.13[D]	mm	Exclude FPC cable
Active area	70.32[H] × 52.74[V]	mm	8.79cm diagonal
Number of dots	960[H] × 240[V]	dot	
Dot pitch	73.25[H] × 219.75[V]	μm	
Surface hardness of the	3	Н	Load: 2.0N
polarizer			
Weight	32.0	g	Include FPC cable

3.3 SERIAL LABEL (S-LABEL)

1) Display Items

S-label indicates the least significant digit of manufacture year (1digit), manufacture month with below alphabet (1letter), model code (5characters), serial number (6digits).

	Contents of display					
а	The least significant digit of manufacture year					
b	Manufacture month	Jan-A	May-E	Sep-I		
		Feb-B	Jun-F	Oct-J		
		Mar-C	Jul-G	Nov-K		
		Apr-D	Aug-H	Dec-L		
С	Model code	35KFC (Made in Japan)				
		35KGC (Made in Malaysia)				
		35KHC (Made in China)				
d	Serial number					

* Example of indication of Serial label (S-label)

•Made in Japan

2E35KFC000125

means "manufactured in 2012, 3.5" KF type, C specifications, serial number 000125"

Made in Malaysia

2E35KGC000125

means "manufactured in 2012, 3.5" KG type, C specifications, serial number 000125"

Made in China

2E35KHC000125

means "manufactured in 2012, 3.5" KH type, C specifications, serial number 000125"

2) Location of Serial Label (S-label) Refer to 3.2 "Outward Form".

No.	Symbol	Function

- Recommended connector

: KYOCERA Connector Products 6281 series [04 6281 267 2x2 846+] : HIROSE ELECTRIC FH26 series [FH26G-67S-0.3SHBW(05)]

 Please make sure to check a consistency between pin assignment in "3.2 Outward Form" and your connector pin assignment when designing your circuit.
 Inconsistency in input signal assignment may cause a malfunction.

- Since FPC cable has gold plated terminals, gilt finish contact shoe connector is recommended.

Note: Please set "Power-on" and "Power-off" sequences in accordance with the "standby sequence" described later.

6. RECOMMENDED OPERATING CONDITIONS

							VSS=0V	
Item	Symbol	Condition		Rating		Unit	Applicable terminal	
	-		MIN	TYP	MAX			
Supply voltage	oltage VDD 2.7 3.0 3.6		3.6	V	VDD			
Input voltage 1 for logic	VI1	VDD=2.7~3.6V	0	—	VDD	V	POCB,CLK,VSYNC	
							HSYNC,D[27:00] MODE	
Input voltage 2 for logic	VI2		0	-	5.5	V	CS/STBY,DI/DE SCK/REV	
Common-electrode	VCOMDC	MODE="VSS"						
center voltage		VCOMDC[5:0]	1.48	1.86	2.24	V	COMDC	
Note 1		=16h~3Ch						
		MODE="VDD"	1.48	1.86	2.24	V		
Operational temperature	Тор	Note 2	-20	+25	+70	°C	Surface of panel	
range Note 3								
Operating humidity range Ho		Ta ≦ 40°C	20	—	85	%		
		Ta > 40°C	Non conde	nsing in an				
			environmer	ntal moisture	e at or less			
			than 40°C8	35%RH.				

Note 1: Common-electrode center voltage indicates that optimum VCOMDC value lies within the bound of these voltages, but it does not mean that the whole range of voltages are the optimum VCOMDC value. This product must to be used with optimized VCOMDC value.

Note 2: This monitor is operatable in this temperature range. With regard to optical characteristics, refer to Item 10."CHARACTERISTICS".

Note 3: Acceptable Forward Current to LED is up to 15mA, when Ta=+70 °C. Do not exceed Allowable Forward Current shown on the chart below.

Forward voltage	VL	Ta=25°C, IL=20.0mA	-	8.7	9.0	V	
Estimated Life	LL	Ta=25°C, IL=20.0mA	-	(50,000)	-	hr	
of LED		Note1					

Note1: - The lifetime of the LED is defined as a period till the brightness of the LED decreases to the half of its initial value.

- This figure is given as a reference purpose only, and not as a guarantee.

- This figure is estimated for an LED operating alone.

- As the performance of an LED may differ when assembled as a monitor together with a TFT panel due to different environmental temperature.

- Estimated lifetime could vary on a different temperature and usually higher temperature could reduce the life significantly.

(13/53) Issue: Jun. 15, 2012

7. 2. AC CHARACTERISTICS 7.2.1 Display Module

(Unless otherwise noted, Ta=25°C,VDD=3.0V,VSS=0V)

Item	Symbol	Condition		Rating		Unit	Applicable terminal
			MIN	TYP	MAX		
CLK Low period	tw1L	0.1×VDD or less	20	1	—	ns	CLK
CLK High period	tw1H	0.9×VDD or more	20	1	—	ns	
Setup time 1	tsp1		10	1	_	ns	CLK,HSYNC,VSYNC

DE Pulse Width	tw4H	—	320	—	CLK	DE,CLK
Horizontal Display Period	thdp	_	320	_	CLK	D[27:02],CLK

Note1: This is recommended spec to get high quality picture on display. It is customer's risk to use out of this frequency. Note2: When Vertical Back Porch is "0", please use odd number for the setting of the total number of lines

that compose one field.

Note3: When DE keeps "Lo" for 21H and 77CLK or longer, start capturing data automatically from "22H and 78CLK".

(17/53)

(19/53)

8.2.2 Serial Communication Timing

After input signal of CS drops from Hi to Lo, the Shift Resister loads 12 bits of serial data from DI at the rising edge of the input signal of SCK.

Mode register and DAC register load the stored data at the rising edge of the input signal of CS. When loaded DI data during the low period of CS is less than 12 bits, all loaded data are discarded . When loaded DI data during the low period of CS is 12 bits or more, the last read of 12 bits is used . Each command is executed by VSYNC immediately after the rising the edge of CS. Serial Communication Control Block is configurable at any time during display and standby mode

as it is completely independent from other circuitry run by CLK in the monitor.

(22/53)

SPECIFICATIONS № 12TLM004

8.2.3 Serial Communication Data

FUNC3 Register Configuration						
bit	Function	Description				
DI4	Test 7	Please fix it to "0".				
DI5	Test 8					
DI6	GM1[0]	Register for gamma potential correction when input data D [*7:*0] is 192(=C0h).				
DI7	GM1[1]					
DI8	GM1[2]					
DI9	GM2[0]	Register for gamma potential correction when input data D[*7:*0] is 148(=94h).				
DI10	GM2[1]					
DI11	GM2[2]					

FUNC4 Register Configuration

bit	Function	Description				
DI4	Test 9	Please fix to "1".				
DI5	Select gamma	Select gamma correction curves. 0: built-in gamma correction curve				
	correction curve	1: user-established gamma correction curve				
DI6	GM3[0]	Register for gamma potential correction when input data D [*7:*0] is 108(=6Ch).				
DI7	GM3[1]					
DI8	GM3[2]					
DI9	GM4[0]	Register for gamma potential correction when input data D[*7:*0] is 64(=40h).				
DI10	GM4[1]					
DI11	GM4[2]					

TEST 0 to TEST 9

Please fix DI4, DI9 through DI11 of the FUNC1 registers to "0". Please fix DI7 of FUNC2 to "1", DI8 and DI19 of FUNC2 to "0". DI10 and DI11 are no connection. Please fix DI4 and DI5 of FUNC3 to "0". Please fix DI4 of FUNC4 to"1".

User Setting Values

Please use "User setting values" to set up PANEL1 through PANEL9, DI4, DI9 through DI11 of FUNC1 and DI7 through DI9 of FUNC2.

Use of unspecified values may cause malfunction.

	(27/53)
SPECIFICATIONS № 12TLM004	Issue: Jun. 15, 2012
(6) PANEL Setting 2 (PANEL2)	
PANEL 2 register 3-bit (DI9 and DI11) can select operating conditions from 8 choices. Please set this register to these values.	
DI9 DI10 DI11 0 0 0	
(7) Horizontal Flyback Period Setting (HDISP)	
Horizontal flyback time can be set from 5 to 258CLK by HDISP register with 8-bit of DI14 thru However, set value of 0 or 1 is prohibited. Actual flyback time is "setting value plus 3CLK". When initial value is 74, a data after a lapse of 74 + 3CLK=77CLK from the rising edge of HS as shown in the following chart.	u DI11. SYNC is displayed
This function can also be used for horizontal display range setup (Horizontal position setup).	
Example : HDISP=74(4Ah)	
HSYNC	
D[27:00]	
(8) PANEL Setting 3 (PANEL3)	
Select operating condition of the signal generated by driver IC in accordance with 8-bit of DI4 of PANEL 3 register. Please set this register to these values.	to DI11
$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	

Issue: Jun. 15, 2012

(9) FUNCTION SET 1 (FUNC1)

FUNC1 register sets and controls the following functions by its each bit of DI5,DI6 and di8.

Vertical Flip Display (Up/Down)

DI5=0 for normal display, DI5=1 for vertical flip display

After completing the setup by serial communication, the selected display mode is carried out by VSYNC. (Normal display is defined when "Product Number" logo on the front case is placed at the bottom.)

<u>Horizontal Flip Display (Right/Left)</u> DI6=0 for normal display, DI6=1 for horizontal flip display The selected display mode is executed at VSYNC after setup by serial communication.

(Please refer to the section 8.3 "Display Data Transfer".)

Backlight Control

DI7 switches the backlight driver IC. BLON terminal outputs set value of DI7. Since its output level is VDD or VSS, this function can also be used for other controls than the backlight. After completing the setup by serial communication, the selected display mode is carried out by VSYNC.

Standby Mode

DI8=0 for standby mode, DI8=1 for normal operation

Since default value of DI8 after power on is "0", it automatically goes to standby mode.

Power consumption is significantly reduced in standby mode by disabling the timing generator and the LCD driving circuitry, and disconnecting current lines.

No image is displayed (white raster display) during standby mode unless DI8 is set to 1 for normal operation by serial communication. Serial data can be received by serial communication block even in standby mode. Please refer to the section 8.4 "Standby (Power Save) Sequence" for standby mode and power on/off sequence. When normal operation is switched to standby mode, afterimage treatment is carried out before switching to standby mode.

SPECIFICATIONS № 12TLM004	Issue: Jun. 15, 2012						
(10) FUNCTION SET 2 (FUNC2) FUNC2 register sets and controls the following functions by its each bit of DI4 thru DI6.							
<u>HSYNC,VSYNC,CLK Polarity Switching</u> Polarity of HSYNG is switched by DI4. DI4=0 for positive polarity input, DI4=1 for negative polarity input. Polarity of VSYNC is switched by DI5. DI5=0 for positive polarity input, DI5=1 for negative polarity input. Polarity of CLK is switched by DI6. DI6=0 for non-inversion, DI6=1 for inversion.							
Initial value of DI4, DI5 and DI6 are "1". The following chart shows polarity of each signal at the initial value. Please set change of VSYNC, HSYNC and display data at the rising edge of CLK.							
VSYNC	—						
HSYNC	—						
	7						
D[27:00]	_						
Polarity of each signal can be changed independently by logic of DI4, DI5 and DI6.							
Example 1 : DI4=0,DI5=DI6=1 (HSYNC has positive polarity and Hi active)							
VSYNC	—						
HSYNC	_						
	7

Gamma Curve Correction Select

DI5=0 of FUNC 4 Register:	Deactivate user configurable gamma correction circuitry. Use built-in gamma curve.
DI5=1 of FUNC 4 Register:	Activate user configurable gamma correction circuitry.

Use user configurable gamma correction curve.

Setting Method of User Configurable Gamma Correction Curve

Gamma curve can be corrected by using GM1[2:0] thru GM4[2:0] registers of FUNC 3 and FUNC 4. GM1 thru GM4 corrects each following gamma potential respectively.

 $GM1[2:0] \rightarrow Input data D[*7:*0] = Register for gamma potential correction at 192(=C0h)$ GM2[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 148(=94h)GM3[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 108(=6Ch)GM4[2:0] → Input data D[*7:*0] = Register for gamma potential correction at 64(=40h)

Below chart shows characteristic curve of gray scale input data - liquid crystal applied voltage. Input value of "0" is assumed to be 0% of applied voltage to liquid crystal, and input value of "225" is assumed to be 100% of applied voltage to liquid crystal. Adjustable range of GM1 thru GM4 registers are described below.

	GM4[2:0]	GM3[2:0]	GM2[2:0]	GM1[2:0]
00h	No correction	No correction	No correction	No correction
01h	54.5%	66.7%	75.8%	84.8%
02h	51.5%	63.6%	72.7%	81.8%
03h	48.5%	60.6%	69.7%	78.8%
04h	45.5%	57.6%	66.7%	75.6%
05h	42.4%	54.5%	63.6%	72.7%
06h	39.4%	51.5%	60.6%	69.7%
07h	36.4%	48.5%	57.6%	66.7%

(31/53)

SPECIFICATIONS № 12TLM004

Issue: Jun. 15, 2012

When no correction is made to gamma potential of GM1 to GM4; The voltages at "0" and "255" are fixed in accordance with the contrast and brightness settings, and voltages at 1 to 254 are determined by resister split ratio produced by the driver IC built-in gamma curve resister. (Refer to the chart in previous page) Liquid crystal applied voltage takes the values of 45.7%, 58.5%, 66.4% and 74,8% when input date is 64, 108, 148 and 192 respectively.

When correction is made to any of GM1 to GM4 by user;

The voltage is corrected in accordance with a correction point and its set value configured by user.

The voltages at 1 to 254 are determined by resister split ratio between voltage at 0 and 225 and input data.

Example:

Darken gray scale in black side.

 \rightarrow Change liquid crystal applied voltage at the 64 point to darken side.

 \rightarrow Set GM4[2:0] to 7h, GM3[2:0] to 6h, GM2[2:0] to 5h and GM1[2:0] to 4h.

(37/53)

8.6 Other Functions

·Built-in Panel Residual Charge Reduction Circuit

When the power turns off in accordance with the mandatory procedure described in the section 8.4 "Standby (Power Save) Sequence", afterimage treatment is carried out after standby mode is set. This circuit automatically reduces panel's residual charge and prevents afterimage for a long time even if standby mode setting fails to be made before power-off.

	Packing item name	Specs, Material
1	Tray	PP
2	Sealing bag	
3	Inner carton	Corrugated cardboard
4	inner board	Corrugated cardboard
5	Outet carton	Corrugated cardboard
6	Drier	Moisture absorber
\bigcirc	Packing tape	
8	Extra outer carton	Corrugated cardboard

- Step 1. Each product is to be placed in one of the cut-outs of the tray with the display surface facing upward.(10products per tray)
- Step 2. Each tray needs to be same orientation respect to the tray below or above it and the trays be in a stack of 10.One empty tray is to be put on the top of stack of 10 trays.
- Step 3. 2 packs of moisture absobers are to be placed on the top tray as shown in the drawing.Put piled trays into a sealing bag.Vacuum and seal the sealing bag with the vacuum sealing machine.
- Step 4. The stack of trays in the plastic back is to be inserted into a inner carton.
- Step 5. A corrugated board is to be placed on the top and on the bottom of the inner carton. The two corrugated boards and the inner carton is to be inserted into an outer carton.
- Step 6. The outer carton needs to sealed with packing tape as shown in the drawing.
 The model number, quantity of products, and shipping date are to be printed on the outer carton.
 If necessary, shipping labels or impression markings are to be put on the outer carton.
- Step 7. The outer carton is to be inserted into a extra outer carton with same direction.The extra outer carton needs to sealed with packing tape as shown in the drawing.
- Step 8. The model number, quantity of products, and shipping date are to be printed on the extra outer carton.If necessary, shipping labels or impression markings are to be put on the extra outer carton.

Dimension of Extra outer carton			
D : Approx.	(338mm)		
W : Approx.	(549mm)		
H : Approx.	(198mm)		
Quantity of products	10 pcs × 10 = 100 pcs		
packed in one carton			
Gross weight : Approx.	6.7kg

14. Handling Instruction

14.1 Cautions for Handling LCD panels

	Caution
(1)	Do not make an impact on the LCD panel glass because it may break and you may get injured from it.
(2)	If the glass breaks, do not touch it with bare hands. (Fragment of broken glass may stick you or you cut yourself on it.
(3)	If you get injured, receive adequate first aid and consult a medial doctor.
(4)	Do not let liquid crystal get into your mouth. (If the LCD panel glass breaks, try not let liquid crystal get into your mouth even toxic property of liquid crystal has not been confirmed.
(5)	If liquid crystal adheres, rinse it out thoroughly. (If liquid crystal adheres to your cloth or skin, wipe it off with rubbing alcohol or wash it thoroughly with soap. If liquid crystal gets into eyes, rinse it with clean water for at least 15 minutes and consult an eye doctor.
(6)	If you scrap this products, follow a disposal standard of industrial waste that is legally valid in the community, country or territory where you reside.
(7)	Do not connect or disconnect this product while its application products is powered on.
(8)	Do not attempt to disassemble or modify this product as it is precision component.
(9)	If a part of soldering part has been exposed, and avoid contact (short-circuit) with a metallic part of the case etc. about FPC of this model, please. Please insulate it with the insulating tape etc. if necessary. The defective operation is caused, and there is a possibility to generation of heat and the ignition.
(10)	Since excess current protection circuit is not built in this TFT module, there is the possibility that LCD module or peripheral circuit become feverish and burned in case abnoramal operation is generated. We recommend you to add excess current protection circuit to power supply.
	Caution This mark is used to indicate a precaution or an instruction which, if not correctly observed, may result in bodily injury, or material damages alone.

Issue: Jun. 15,

14.2 Precautions for Handling

- Wear finger tips at incoming inspection and for handling the TFT monitors to keep display quality and keep the working area clean.
 Do not touch the surface of the monitor as it is easily scratched.
- Wear grounded wrist-straps and use electrostatic neutralization blowers to prevent static charge and discharge when handling the TFT monitors as the LED in this TFT monitors is damageable to electrostatic discharge. Designate an appropriate operating area, and set equipment, tools, and machines properly when handling this product.
- Avoid strong mechanical shock including knocking, hitting or dropping to the TFT monitors for protecting their glass parts. Do not use the TFT monitors that have been experienced dropping or strong mechanical shock.
- 4) Do not use or storage the TFT monitors at high temperature and high humidity environment. Particularly, never use or storage the TFT monitors at a location where condensation builds up.
- 5) Avoid using and storing TFT monitors at a location where they are exposed to direct sunlight or ultraviolet rays to prevent the LCD panels from deterioration by ultraviolet rays.
- Do not stain or damage the contacts of the FPC cable .
 FPC cable needs to be inserted until it can reach to the end of connector slot.
 During insertion, make sure to keep the cable in a horizontal position to avoid an oblique insertion.
 Otherwise, it may cause poor contact or deteriorate reliability of the FPC cable.
- 7) Do not bend or pull the FPC cable or carry the TFT monitor by holding the FPC cable.
- Peel off the protective film on the TFT monitors during mounting process. Refer to the section 14.5 on how to peel off the protective film. We are not responsible for electrostatic discharge failures or other defects occur when peeling off the protective film.

14.3 Precautions for Operation

- Since this TFT monitors are not equipped with light shielding for the driver IC, do not expose the driver IC to strong lights during operation as it may cause functional failures.
- 2) When turning off the power, turn off the input signal before or at the same timing of switching off the power.
- Optimize VCOMDC within recommended operating conditions.
 * When VCOMDC is not an optimal value, flicker and image sticking will be occuerd.
- 4) Do not plug in or out the FPC cable while power supply is switch on. Plug the FPC cable in and out while power supply is switched off.
- 5) Do not operate the TFT monitors in the strong magnetic field. It may break the TFT monitors.
- Do not display a fixed image on the screen for a long time.
 Use a screen-saver or other measures to avoid a fixed image displayed on the screen for a long time.
 Otherwise, it may cause burn-in image on the screen due the characteristics of liquid crystal.

SPECIFICATIONS № 12TLM004

14.4 Storage Condition for Shipping Cartons

Storage environment

•	Temperature	0 to 40° C
•	Humidity	60%RH or less
		No-condensing occurs under low temperature with high humidity condition.
•	Atmosphere	No poisonous gas that can erode electronic components and/or wiring materials should be detected.
•	Time period	3 months
•	Unpacking	To prevent damages caused by static electricity, anti-static precautionary measures (e.g. earthing, anti-static mat) should be implemented.

Maximum piling up 7 cartons

14.5 Precautions for Peeling off the Protective film

The followings work environment and work method are recommended to prevent the TFT monitors from static damage or adhesion of dust when peeling off the protective films.

A) Work Environment

- a) Humidity: 50 to 70 %RH, Temperature15 to 27 °C
- b) Operators should wear conductive shoes, conductive clothes, conductive finger tips and grounded wrist-straps. Anti-static treatment should be implemented to work area's floor.
- c) Use a room shielded against outside dust with sticky floor mat laid at the entrance to eliminate dirt.

B) Work Method

- The following procedures should taken to prevent the driver ICs from charging and discharging.
- a) Use an electrostatic neutralization blower to blow air on the TFT monitors to its lower left when FPC is placed at the bottom.
 Optimize direction of the blowing air and the distance between the TFT monitors and the electrostatic neutralization blower.
- b) Put an adhesive tape (Scotch tape, etc) at the lower left corner area of the protective film to prevent scratch on surface of TFT monitors.
- c) Peel off the adhesive tape slowly (spending more than 2 secs to complete) by pulling it to opposite direction.

APPENDIX

Reference Method for Measuring Optical Characteristics and Performance

. Measurement Condition						
Measuring instruments:	CS1000 (KONICA MINOLTA), LCD7000 (OTSUKA ELECTRONICS), EZcontrast160D (ELDIM)					
Driving condition:	Refer to the section "Optical Characteristics"					
Measured temperature:	25°C unless specified					
Measurement system:	See the chart below. The luminance meter is placed on the normal line of measurement system.					
Measurement point:	At the center of the screen unless otherwise specified					

Measurement is made after 30 minutes of lighting of the backlight.

Measurement point:

At the center point of the screen Brightness distribution: 9 points shown in the following drawing.

Dimensional ratio of active area

Backlight IL=20mA

2. Test Me	thod			
Notice	Item	Test method	Measuring	Remark
	_		instrument	
1	Response	Measure output signal waveform by the luminance	LCD7000	Black display
	time	meter when raster of window pattern is changed from		[Data]=00h
