

## VIDEO DIFFERENTIAL INPUT RECEIVER

### ■GENERAL DESCRIPTION

The NJM2507 is video differential input receiver. The differential signal is converted to the single-end signal. The single-end signal can be transmitted by the differential signal by the connection with NJM2504.

And, it is converted to the single-end signal by the NJM2507.

The common mode noise can be removed because of the differential motion transmission, and it is the best for the transmission of car AV system.

## APPLICATION CIRCUIT

When the receiver is single end input, the NJM2507 becomes GND noise isolator on the transmitter.

Connect GND of the receiver to Vref terminal of the NJM2507. (Note1)

The NJM2507 outputs signal that has canceled the GND noise, because GND reference is the receiver. (Note2)
